

NILCE GABRIELA VILA CCOPA

FRONT-END-DEVELOPER

PROFILE

Front-End Developer with experience creating functional, intuitive, and visually engaging web interfaces. Skilled in HTML5, CSS3, JavaScript, React, Angular, and Astro, with experience translating UI designs into responsive web experiences using Figma. Familiar with REST API integration, Git, and full-stack development, allowing me to collaborate effectively with frontend and backend teams. Creative, adaptable, and detail-oriented, with a strong focus on usability and user experience.

WORK EXPERIENCE

2025

San José, Costa Rica

E-commerce - SyL Travel

- Developed responsive web pages based on Figma designs using Next.js, TypeScript, Tailwind CSS, and HeroUI.
- Created reusable UI components to maintain consistency across the platform.
- Integrated pages with Strapi CMS using structured TypeScript data models to display dynamic tour and website content.
- Collaborated with the team to implement and refine frontend features for a production tourism platform.

2024 - PRESENT

San José, Costa Rica

Freelance - VilaWare

- Developed websites and e-commerce platforms with technologies such as HTML, CSS, TailwindCSS, JavaScript, React, Astro, HeroUI, and Strapi.
- Designed UI with tools such as Figma and Adobe XD.
- Managed projects from planning through final delivery.

ACADEMIC EXPERIENCE

2025

San José, Costa Rica

E-commerce - Blooming

- Web application focused on selling flowerpots and plant care.
- Developed the frontend of a web application using Angular.
- Designed the user interface and user experience in Figma.
- Integrated the frontend with a Java Spring Boot backend and external APIs.
- Implemented features including Google authentication, AI API integration, and location-based nursery discovery.

2024

San José, Costa Rica

Pets Hotel - Pets Inn

- Multipurpose platform to manage pet reservations in a hotel, implementing frontend and backend.
- Features: user registration (client, employee, admin), OTP login, reservations, PayPal payments, reports, and service visualization.
- Integration of an IoT wearable device that measures temperature and humidity, connected to programmed boards in Python/C++, with WiFi and Bluetooth connectivity.
